

YOUR SAFETY IS OUR BUSINESS.

Aegis Mobility FleetSafer®

Aegis Mobility is the pioneer and leader in creating solutions to address the problem of distracted driving due to mobile devices in vehicles.

FleetSafer from Aegis Mobility is software for Samsung smartphones and tablets that automatically detects driving state and puts the device in “Safe Mode” while driving. In Safe Mode, a curtain screen blocks access to the keyboard and screen. All notifications and alerts are silenced – including incoming calls, texts and emails. Hands-free calls are permitted if allowed by company policy and only if a headset is detected. However, 911 is always accessible.

Key Features

FleetSafer includes full access to a cloud-based administrative portal that provides a uniform interface, regardless of trigger method or device type, for configuration, deployment, analytics, auditing and reporting. The service includes flexibility in policy options that are configurable by the customer and enforced by the software. Reporting capabilities include ranked driver listings and graphical event maps.

- Automatically activates/deactivates “Safe Mode”
- Blocks distractions including calls, texts and emails
- Quick access at end of drive
- Industry-leading battery life and accuracy
- Activation options based on time of day or day of week
- Reports and alerts on infractions and overrides
- Deploys over the air or via a mobile device management platform
- Optionally whitelists apps and phone numbers
- Optionally permits hands-free calls and passenger overrides
- Emergency calls are always allowed

Customer Benefits

FleetSafer is fast becoming the industry standard for the enforcement and audit of corporate safe-driving policies. By eliminating one of the leading causes of vehicle crashes, FleetSafer provides enterprise customers with a return on investment through avoided accidents and protects companies from the risk and liability associated with distracted driving.
